## **COURSE OBJECTIVES**

Upon successful completion of the course, the participants will be able to:

- Demonstrate an understanding of fundamental exercise science principles, including anatomy, physiology, biomechanics, and bioenergetics
- Explain the relationship between exercise and the body's response and adaptation
- Analyse and interpret fitness test results to identify strengths and areas for improvement based on client's fitness level
- Create well-structured and periodised exercise programs that align with specific client goals and training objectives
- Apply exercise programming principles to design workout routines tailored to specific client scenarios
- Develop strategies to integrate cardiovascular and resistance training into comprehensive fitness regimens for different populations
- Critique and modify exercise programs based on client feedback and progress evaluations
- Evaluate the effectiveness of nutrition recommendations in supporting clients' performance and health goals
- Assess and improve personal coaching and communication skills to enhance client motivation and adherence
- Demonstrate competency in applying training techniques and exercise modifications through hands-on training
- Assess the business aspects of personal training, identifying potential legal and ethical challenges and proposing appropriate solutions.
