Course Synopsis

Obesity and weight management are significant health concerns worldwide. It is a major risk factor for various chronic conditions such as diabetes, cardiovascular disease and certain cancers. This course aims to provide a comprehensive understanding of the causes, consequences, and management strategies for obesity and weight-related issues. Students will develop knowledge and skills in assessing, preventing, and managing obesity, including understanding the impact of diet, physical activity, behaviour, and other lifestyle factors on body weight. This course will also discuss various societal, cultural, and environmental factors that contribute to obesity and the role of public health policies in addressing this complex issue.

Course Objectives

Upon successful completion of the course, participants will be able to:

- Develop an understanding of obesity as a disease – causes, effects and impacts
- Develop a holistic approach to the managing obesity
- Be able to evaluate current policies and guidelines
- To understand the complexities of obesity and the challenges faced
